ANNUAL HEALTH STATISTICS REPORT

Havana, 2014

MINISTRY OF PUBLIC HEALTH
NATIONAL MEDICAL RECORDS AND HEALTH STATISTICS BUREAU

PRESENTATION

The National Medical Records and Health Statistics Bureau of The Ministry of Public Health of Cuba introduces to you the 42nd publication of the Annual Health Statistics Report with updated information until 2013.

Indicators are organized in 78 statistical tables according to time, gender and age covers. The information undertakes the following issues: Demography, Mortality, Morbidity, Personnel and Resources, Services and Health personnel training. Statistical data come from the Health Information System. The population data have been provided by The Center for Population and Development Studies from the National Statistics and Information Bureau.

The Cuban Health Statistical System uses mostly the method of continuous registration, with national coverage and departments of statistics and medical registries in all health institutions as well as in the municipal, provincial and national structures, where the Medical Records and Health Statistics Bureau is located.

The mortality and the morbidity statistics have been processed according to the ICD-10.

This document is also available in HTML format at the URL address, specified in the footnotes of this page.

We hope the purpose of this publication be fulfilled, so our users are invited to give their opinions or make suggestions.

Other causes	5	7	9	3.8	5.6	7.1
Malignant neoplasms (C00-C97)	-	1	2	-	0.8	1.6
Disease of the respiratory system (J00-J99)	-	2	-	-	1.6	-
Assault (X85-Y09)	-	1	2	-	0.8	1.6
Mortality related to pregnancy, childbirth and the puerperium	59	49	58	44.3	39.0	46.1
Late maternal death	5	8	7	3.8	6.4	5.6
Death from sequelae of direct obstetric causes	3	5	-	2.3	4.0	-

Definitions:

- **Mortality related to pregnancy, childbirth and the puerperium:** A pregnancy-related death of a woman while pregnant or within 42 days of termination of pregnancy, irrespective of the cause of death.
- **Late maternal death:** A late maternal death is the death of a woman from direct or indirect obstetric causes more than 42 days but less than one year after termination of pregnancy.
- **Death from sequelae of direct obstetric causes:** Death from any direct obstetric cause occurring one year or more after termination of pregnancy.
